

CAMELLIA GRP PLANTER

Product Code: SFD611

PRODUCT DESCRIPTION

The Camellia Planter comes in a variety of sizes and are the smallest trough planter range. These troughs are perfect for small gardens, roof terraces or balconies due to the fact that they are made from Glass Reinforced Plastic. This ensures they are strong, durable, frost proof, rust proof, yet also light weight.

The Camellia Planters have a very contemporary appearance and therefore look stunning in any garden or roof terrace space. Just add plants!

All GRP planters are made from a mould and there are several standard sizes available, if you require a different size please contact us for a quote on bespoke sizes. Each planter is handmade to order in the factory and it would depend on the size of the trough as to the thickness of the material used. This can range from 2mm to 10mm thickness. Additional strengthening is also used for larger planters where necessary to ensure that they can hold the volume of soil or compost required sufficiently.

To make a continuous planting bed, all GRP planters can be cut out at the ends so that they can join together making long planting beds where necessary, to give seamless planting.

When planting up troughs approximately 25% of drainage media should be used and when planting up outside, ensure that each trough is slightly lifted off the ground to allow for free drainage.

All planters are available in any RAL colour matt, satin, gloss, metallic or special effect finishes such a concrete effect. (contact us for more information). Also these planters can be made in company colours or for that extra special touch can have corporate logos added.

SPECIFICATIONS

Weight	220.00 kg
Length	1000mm
Width	300mm
Height	400mm
Fixing	Surface Mounted
Material	GRP (Glass Reinforced Plastic)
Colour	Galvanised
