

PARABOLA PHOTOCELL DUSK TO DAWN ILLUMINATED BOLLARD

Product Code: SFD596

** BULK BUY DISCOUNT*

PRODUCT DESCRIPTION

These robust, vandal resistant illuminated bollards have double ‘Parabolic Reflector’ heads and clear, quality UV stop PC diffusers. The louvers and diffuser enable an even, downwards light dispersal around the bollard as well as adding protection to the bulb. The light effect is one of a low-level glowing post, marking the way.

The bollard comes in a graphite black finish and is available in a range of heights (400mm, 600mm, 800mm or 1000mm). Ideal for driveways and paths, there are also 3 styles of head: ‘domed’, ‘pillar’ or ‘ flat’ top.

The head and 2.5mm thick extruded aluminium cylinder of the bollard are created from heavy duty die-cast aluminium. All screws are stainless steel, resulting in a completely rustproof and non-corrosive model.

Importantly, the inbuilt photocell dusk to dawn sensor automatically turns the bollard light on when it detects dark, and off again when light. Therefore, there is no need to remember to switch the fitting on and off manually, which results in less product maintenance. The E27 / ES bulb holder accommodates almost any LED bulb. Using LEDs is a very effective way to reduce energy bills.

SPECIFICATIONS

Weight	25.00 kg
Height	From 400mm
Diameter	170mm
Fixing	Surface Mounted
Material	Aluminium
Colour	Galvanised
